

“ I support the goal of the VQC to improve the outcomes and experiences for patients who have a vasectomy procedure. I believe that all urologists who perform vasectomies should be certified.

TRUST YOUR VASECTOMY TO A CERTIFIED SPECIALIST

Robert Pugach, MD, Certified by the Vasectomy Quality Council

By Yvette M. Manard, MPH

Most women know that, when it's time to consider a permanent form of birth control, **a woman is more than twice as likely as a man to undergo a sterilization procedure.**

That makes no sense! A female sterilization requires general anesthesia and abdominal surgery. It is far more dangerous and complicated than a 15 minute vasectomy that can be easily done in a **certified medical office.**

Orange County/Beverly Hills urologist **Dr. Robert Pugach is one of the most experienced vasectomy doctors in the world.** He helped pioneer the No Scalpel Vasectomy procedure in the United States. "I learned this from Chinese urologists when I taught there several years ago. Our advances in North America made the No Needle No Scalpel vasectomy procedure painless with the anesthesia jet spray. We no longer use needles or scalpels. It takes only 15 minutes! It's how I had my vasectomy done. There are NO needles and NO scalpels and it takes less than 15 minutes!"

So, men, is it time to discuss a No Needle No Scalpel Vasectomy? **If you've been thinking of a responsible method of birth control, this may be your answer!** For couples, it's reassuring to know that there is no chance of an unwanted pregnancy. In fact, we offer a money-back guarantee! Lastly, it's comforting to realize that a vasectomy is safer, less painful and far less expensive than a woman undergoing a tubal ligation.

Need more reassurance? **Dr. Robert Pugach is certified by the Vasectomy Quality Council with a 5 star rating.** "I'm proud to be certified by the VQC. Their mission is to set vasectomy quality care standards and provide patient satisfaction data to men who are considering a vasectomy procedure," says Dr. Pugach. "I support the goal of the VQC to improve the outcomes and experiences for patients who have a vasectomy procedure. I believe that all urologists who perform vasectomies should be certified."

ABOUT THE VASECTOMY QUALITY COUNCIL

The VQC is an independent accrediting entity that collects data from urologists who perform vasectomies. The data is collected in two parts so that prospective patients and payers can see the results from surveyed patients on a variety of patient satisfaction and patient quality outcome areas.
